

Pinfabb Remote Kit

Advanced Remote Assistance for your stabilizing fins

When service engineers cannot inspect vessels physically, a practical alternative for customers is to use remote service sessions. During the years customers joining the Remote Service package have been more and more and this tool has proven to be very reliable and useful to solve tasks remotely, avoiding costs as travel, engineer on place, etc.

Pinfabb Remote Service Software statistics only in 2019 are stunning:

- 89,300.00 euro saved.
- 22,933 kg of CO2 reduced.
- 95% of problem solved in less than 2 hours.

This is possible due to the special POSEIDON configuration, composed by high-level plug-and-play components, which make it unique among all the industry.

So we have created a tool for helping who is not yet a Pinfabb customer, in obtaining real-time assistance for every kind of stabilizers: PINFABB REMOTE KIT.

Pinfabb Remote Kit is composed by a robust and compact hardware that can be delivered directly to the ship by Pinfabb with simple connecting instructions and it is compatible with every existing stabilizing control. After connection, Pinfabb Engineers will be able to connect remotely to the stabilizers plant for helping the crew in diagnosis, troubleshooting, provides operational support and guidance like being onboard.

There are also other great benefits into purchasing Pinfabb Remote Kit:

- 1 year FREE-OF-CHARGE Remote Service.
- Hardware can be now purchased with 30% discount.
- because it has been designed using the same POSEIDON hardware, it means that it will be possible to convert it to a POSEIDON installation whenever convenient for the owner; meaning to retrofit the ship stabilizers plant with a modern, reliable, and ECO friendly system which can be added to SEEMP.
